

AI WhatsApp operations for bulk sales follow-up.

WhatsyITC helps teams upload customer batches, send approved WhatsApp messages, let AI handle follow-ups with business knowledge, and surface only the conversations that need a human.

1**Upload**

Import retailers, invoices, and phone numbers.

2**Approve**

Validate rows and send using templates.

3**Enable AI**

Assign an agent and batch-specific follow-up plan.

4**Respond**

AI uses knowledge plus chat history to reply.

5**Review**

Urgent leads move to the human review queue.

WHAT IT IS

A simple control room for WhatsApp sales conversations.

The product is built for operators who manage many phone numbers but only want to spend time where human attention matters.

PRIMARY CHANNEL

WhatsApp

CORE ENGINE

AI + KB

BEST FOR

Batches

HUMAN FOCUS

Urgency

For business teams

Upload a spreadsheet, approve clean rows, send WhatsApp messages, and track replies from one admin workspace.

- Batch upload and validation.
- Approved template sending.
- Batch names, resend, and tracking.
- Unified chat view for inbound and outbound messages.

For AI follow-up teams

Turn on AI per batch, choose the agent, edit follow-up plans, and monitor what the AI is doing per phone.

- Batch-specific AI agent setup.
- Knowledge-base grounded replies.
- Conversation timeline and next-message control.
- Human review queue for urgent numbers.

Goal: the user should not need to understand AI pipelines. They should see who needs attention, what happened, and what to do next.

HOW IT WORKS

From spreadsheet to AI-managed conversation.

WhatsyITC combines structured batch data, WhatsApp delivery events, chat history, and business knowledge into one operating loop.

U**Upload batch**

CSV/XLSX rows become retailers, billing records, and send-ready jobs.

T**Send template**

Meta-approved WhatsApp templates start the conversation safely.

A**AI follow-up**

The selected agent reads history, retrieves knowledge, and replies.

H**Human review**

Rules and AI signals raise important phone numbers for action.

**Knowledge base**

Add product, pricing, policy, FAQ, and process notes. The AI retrieves the most relevant chunks before replying.

Conversation memory

The system uses recent chat history, so follow-up messages stay personal and aware of context.

Operator control

Humans can take over, send manually, edit next messages, or hand the thread back to AI.

FEATURE MAP

What users can do.

The interface is split into focused areas so each screen has a clear job.

AREA	PURPOSE	BEST USER ACTION
Bulk Messages	Upload batches, validate phone rows, approve, send, resend, and rename batches.	Use it when starting or repeating a campaign.
Chats	Shows a unified WhatsApp thread for each phone, including inbound and outbound messages.	Use it for direct operational chat review.
AI Assistant	Configure agent name, tone, model, system prompt, and knowledge access.	Use it before enabling AI on batches.
AI Knowledge	Create searchable knowledge chunks from text, FAQs, products, and policies.	Keep facts fresh before testing the agent.
AI Follow-ups	Enable AI per batch, choose timeline, preview next message, and inspect recipient control rooms.	Use it to manage one batch in detail.
Human Review	Shows urgent phone numbers with reason, severity, suggested action, and optional AI help.	Start here every day to handle the highest-risk leads first.
AI CRM	Batch-wise summary of replies, lead priority, action required, and AI-generated insights.	Use it as the manager dashboard.

Action required

Human review logic

The queue highlights cases such as buyer replies, failed sends, handoff requests, price questions, complaints, product confusion, and hot-lead signals.

Human needed

Price question

Hot lead

AI help

Operator assistance

When a number needs attention, the operator can ask AI for a concise summary, suggested reply, and next action based on recent messages.

Draft reply

Next step

AI BEHAVIOR

Smart automation without losing control.

AI is used where it saves time. Human controls remain visible when trust, urgency, or business judgment matters.

What the AI uses

- Selected agent instructions and tone.
- Batch context and recipient details.
- Recent WhatsApp message history.
- Knowledge-base retrieval with embeddings.
- Rules for human review and handoff.

What humans can control

- Enable or disable AI per batch.
- Choose the batch agent or use global default.
- Edit or generate the next follow-up message.
- Take over a conversation and send manually.
- Return a resolved thread back to AI.

Recommended daily workflow

1

Open Human Review

Handle critical and high-priority phone numbers first.

2

Check AI CRM

Review batch-level momentum and action-required signals.

3

Inspect batches

Open the batch control room only when a plan needs adjustment.

4

Improve KB

Add missing facts when AI confidence or answer quality drops.

Safety and reliability principles

The product avoids hidden automation. The UI shows send errors, paused follow-ups, handoff status, failed delivery, duplicate-phone warnings, and batch ownership so operators know why the AI did or did not act.

ROLLOUT CHECKLIST

How to get the best experience.

Keep the first rollout simple: one clean batch, one good agent, one strong knowledge base, and a daily review routine.

Before launch

- Add WhatsApp credentials in Settings.
- Create or verify message templates.
- Add product and pricing knowledge.
- Test agent replies in playground.

First batch

- Upload a small clean spreadsheet.
- Rename the batch clearly.
- Approve and send initial template.
- Enable AI only after checking recipients.

Daily operation

- Start from Human Review.
- Use AI help for suggested replies.
- Watch AI CRM for batch trends.
- Update knowledge when users ask new things.

Product promise

WhatsyITC turns scattered WhatsApp follow-ups into a focused operating system: every batch is trackable, every conversation is visible, AI handles routine replies, and humans see the numbers that actually need judgment.

Best first demo: upload a small batch, send one approved template, enable AI, send a customer reply from WhatsApp, then show the same phone appearing in Chats, AI Conversations, Human Review, and AI CRM.
